INDEX TO AUTHORS

A

Anfinsen, Christian B. See *Olson and Anfinsen*, 67

Awapara, Jorge. The influence of fluoroacetate on the concentration of free amino acids in rat organs, 695

Axelrod, Bernard, Saltman, Paul, Bandurski, Robert S., and **Baker, Rosamund S.** Phosphohexokinase in higher plants, 89

Ayengar, Padmasini, and **Roberts, Eugene.** Utilization of D-glutamic acid by *Lactobacillus arabinosus:* glutamic racemase, 453

B

Baker, Rosamund S. See *Axelrod, Saltman, Bandurski, and Baker*, 89

Bandurski, Robert S. See *Axelrod, Saltman, Bandurski, and Baker*, 89

Basinski, Daniel H., Williams, June D., and **Freund, Hugo A.** The effect of cortisone and adrenocorticotropic hormone on tyrosine metabolism in the scorbutic guinea pig, 433

Bauer, Hugo. See *Mehler, Tabor, and Bauer*, 475

Black, Arthur L., Kleiber, Max, and **Smith, Arthur H.** Carbonate and fatty acids as precursors of amino acids in casein, 365

—. See *Kleiber, Smith, Black, Brown, and Tolbert*, 371

Bock, Robert M. See *Sanadi, Littlefield, and Bock*, 851

Bortner, Henry W. See *Loring, Fairley, Bortner, and Seagran*, 809

Braun, Armin C. See *Woolley, Pringle, and Braun*, 409

Brown, David H., Park, C. R., Daughaday, William H., and **Cornblath, Marvin.** The influence of preliminary soaking on glucose utilization by diaphragm, 167

—. See *Park, Brown, Cornblath, Daughaday, and Krahl*, 151

Brown, George Bosworth. See *Lowy, Davoll, and Brown*, 591

Brown, Mary A. See *Kleiber, Smith, Black, Brown, and Tolbert*, 371

Brunish, Robert, and **Luck, J. Murray.** Amino acid "incorporation" *in vitro* by desoxypentose nucleoprotein and histone, 869

C

Camien, Merrill N. Antagonisms in the utilization of D-amino acids by lactic acid bacteria. IV. D-Aspartic acid, 687

Campbell, Jean M. See *Singer, Eggman, Campbell, and Wildman*, 233

Carpenter, Frederick H., Hess, George P., and **Li, Choh Hao.** Distribution studies on partial peptic hydrolysates of adrenocorticotropic hormone, 7

Chaikoff, I. L. See *Forker, Chaikoff, and Reinhardt*, 625

—. See *Masri, Lyon, and Chaikoff*, 621

Chance, Britton. The kinetics and inhibition of cytochrome components of the succinic oxidase system. I. Activity determinations and purity criteria, 557

—. II. Steady state properties and difference spectra, 567

—. Oxidase and peroxidase reactions in the presence of dihydroxymaleic acid, 577

Chanutin, Alfred. See *Hoch and Chanutin*, 503

Cheldelin, Vernon H. See *Labbe, Thomas, Cheldelin, Christensen, and Wang*, 655

—. See *Wang, Labbe, Christensen, and Cheldelin*, 645

—. See *Wang, Thomas, Cheldelin, and Christensen*, 663

Christensen, Bert E. See *Labbe,*

Thomas, Cheldelin, Christensen, and Wang, 655
Christensen, Bert E. See *Wang, Labbe, Christensen, and Cheldelin,* 645
—. See *Wang, Thomas, Cheldelin, and Christensen,* 663
Collins, Annie R. See *Graff,* 741
Copeland, Bradley E., and **Sunderman, F. William.** Studies in serum electrolytes. XVIII. The magnesium-binding property of the serum proteins, 331
Cornblath, Marvin. See *Brown, Park, Daughaday, and Cornblath,* 167
—. See *Park, Brown, Cornblath, Daughaday, and Krahl,* 151

D

Daughaday, William H. See *Brown, Park, Daughaday, and Cornblath,* 167
—. See *Park, Brown, Cornblath, Daughaday, and Krahl,* 151
Davis, E. F. See *Mason and Davis,* 41
Davoll, John. See *Lowy, Davoll, and Brown,* 591
Day, Eugene D., and **Mosher, William A.** An improved colorimetric method for the quantitative estimation of thymine, 227
Delluva, Adelaide M. See *Edmonds, Delluva, and Wilson,* 251
Dewey, Virginia C. See *Heinrich, Dewey, Parks, and Kidder,* 199
—. See *Kidder, Dewey, and Parks,* 193
Dhungat, S. B., and **Sreenivasan, A.** Synthesis of xanthine oxidase by rat liver slices *in vitro,* 831
Dietrich, L. S., Monson, W. J., Williams, J. N., Jr., and **Elvehjem, C. A.** A comparison of the effects of 6-formylpteridine on chick liver xanthine oxidase activity *in vivo* and *in vitro,* 37
Dowmont, Y. Patricia, and **Fruton, Joseph S.** Chromatography of peptides as applied to transamidation reactions, 271
Dratz, Arthur F., and **Handler, Philip.** Renal phosphate and carbohydrate metabolism studied with the aid of radiophosphorus, 419

E

Edelhoch, H., Hayaishi, Osamu, and **Teply, L. J.** The preparation and properties of a soluble diphosphopyridine nucleotide cytochrome *c* reductase, 97
Edmonds, Mary, Delluva, Adelaide M., and **Wilson D. Wright.** The metabolism of purines and pyrimidines by growing yeast, 251
Eggman, Luther. See *Singer, Eggman, Campbell, and Wildman,* 233
Elliott, Stuart D. See *Mycek, Elliott, and Fruton,* 637
Elliott, William E. Volumetric determination of calcium in blood serum, 641
Elvehjem, C. A. See *Dietrich, Monson, Williams, and Elvehjem,* 37
Engel, Frank L. See *Schwartz, Engel, and Towbin,* 381
Evans, E. A., Jr. See *Koch, Putnam, and Evans,* 105, 113

F

Fairley, James L. See *Loring, Fairley, Bortner, and Seagran,* 809
—. See *Loring, Fairley, and Seagran,* 823
Fallot, Pierre. See *Schmidt, Hecht, Fallot, Greenbaum, and Thannhauser,* 601
Feigelson, Philip. The inhibition of xanthine oxidase *in vitro* by trace amounts of *l*-ascorbic acid, 843
Fink, Kay, Henderson, Robert B., and **Fink, R. M.** β-Aminoisobutyric acid in rat urine following administration of pyrimidines, 441
Fink, R. M. See *Fink, Henderson, and Fink,* 441
Fleisher, Gerard A. See *Mattox, Woroch, Fleisher, and Kendall,* 261
Forker, L. L., Chaikoff, I. L., and **Reinhardt, W. O.** Circulation of plasma

proteins: their transport to lymph, 625
Fraser, Phyllis E. See *Meister, Sober, Tice, and Fraser*, 319
Freund, Hugo A. See *Basinski, Williams, and Freund*, 433
Friedmann, Bernice. See *Weinhouse and Friedmann*, 733
Fruton, Joseph S. See *Dowmont and Fruton*, 271
—. See *Mycek, Elliott, and Fruton*, 637

G

Goldfarb, A. Robert. See *Saidel, Goldfarb, and Waldman*, 285
Graff, Morris M. Determination of dehydroisoandrosterone and 17-ketosteroids, 741
Green, Harry, and **Meyerhof, Otto.** Synthetic action of phosphatase. III. Transphosphorylation with intestinal and semen phosphatase, 347
Green, Maurice, and **Stahmann, Mark A.** Synthesis and enzymatic hydrolysis of glutamic acid polypeptides, 771
Greenbaum, Lowell. See *Schmidt, Hecht, Fallot, Greenbaum, and Thannhauser*, 601
Griffiths, Mervyn. Oxidation of uric acid catalyzed by copper and by the cytochrome-cytochrome oxidase system, 399
Guehring, Raymond R., Hurley, Lucille S., and **Morgan, Agnes Fay.** Cholesterol metabolism in pantothenic acid deficiency, 485

H

Handler, Philip. See *Dratz and Handler*, 419
Hanok, Albert. See *Sobel and Hanok*, 669
Hargreaves, Chester A., II. See *Vickery and Hargreaves*, 121
—. See *Vickery, Hargreaves, and Nolan*, 133
Hayaishi, Osamu, and **Kornberg, Arthur.** Metabolism of cytosine, thymine, uracil, and barbituric acid by bacterial enzymes, 717
Hayaishi, Osamu. See *Edelhoch, Hayaishi, and Teply*, 97
Hayden, Alma Levant. See *Heftmann and Hayden*, 47
Hecht, Liselotte. See *Schmidt, Hecht, Fallot, Greenbaum, and Thannhauser*, 601
Heftmann, Erich, and **Hayden, Alma Levant.** Paper chromatography of steroid sapogenins and their acetates, 47
Heinrich, M. R., Dewey, Virginia C., Parks, R. E., Jr., and **Kidder, G. W.** The incorporation of 8-azaguanine into the nucleic acid of *Tetrahymena geleii*, 199
Henderson, Robert B. See *Fink, Henderson, and Fink*, 441
Hess, George P. See *Carpenter, Hess, and Li*, 7
Hoch, Hans, and **Chanutin, Alfred.** Effects of anticoagulants on serum and plasma, 503
Hogeboom, George H., and **Schneider, Walter C.** Cytochemical studies. VI. The synthesis of diphosphopyridine nucleotide by liver cell nuclei, 611
Holechek, Joseph J. See *Graff*, 741
Horowitz, N. H., and **Shen, San-Chiun.** *Neurospora* tyrosinase, 513
Hurley, Lucille S. See *Guehring, Hurley, and Morgan*, 485

INDEX TO SUBJECTS

A

Acetate: Carbon 14-labeled, radioactive yeast fractions, relation, *Labbe, Thomas, Cheldelin, Christensen, and Wang*, 655

— —, utilization, yeast, *Wang, Labbe, Christensen, and Cheldelin*, 645

Fluoro-. *See* Fluoroacetate

Liver, lipogenesis, insulin effect, *Masri, Lyon, and Chaikoff*, 621

Milk constituents, precursor, *Kleiber, Smith, Black, Brown, and Tolbert*, 371

Yeast, aspartic acid conversion from, *Wang, Thomas, Cheldelin, and Christensen*, 663

Acetic acid: Imidazole-. *See* Imidazoleacetic acid

Acetylcholinesterase: Binding forces, *Wilson*, 215

Acid(s): Organic. *See* Organic acid

Adrenalectomy: Liver, fatty acid oxidation, effect, *Lipsett and Moore*, 303

Adrenocorticotropic hormone: Peptic hydrolysates, distribution studies, *Carpenter, Hess, and Li*, 7

Tyrosine metabolism, scurvy, effect, *Basinski, Williams, and Freund*, 433

Alanine: L-, peptides, *Lactobacillus casei* growth, relation, *Kihara and Snell*, 791

Alloxan: Metabolism, injection effect, *Lee and Stetten*, 205

Amino acid(s): Absorption spectra, *Saidel, Goldfarb, and Waldman*, 285

Carbon dioxide fixation by *Serratia marcescens*, effect, *McLean and Purdie*, 539

Casein, carbonate and fatty acids as precursors, *Black, Kleiber, and Smith*, 365

D-, lactic acid bacteria, utilization, *Camien*, 687

—, — — —, utilization, D-aspartic acid effect, *Camien*, 687

Desoxypentose nucleoprotein, incorporation *in vitro*, *Brunish and Luck*, 869

Free, tissues, fluoroacetate effect, *Awapara*, 695

Histone, incorporation *in vitro*, *Brunish and Luck*, 869

Aminoisobutyric acid: β-, urine, pyrimidine administration effect, *Fink, Henderson, and Fink*, 441

Androsterone: Dehydroiso-. *See* Dehydroisoandrosterone

Anticoagulant(s): Blood serum and blood plasma, effect, *Hoch and Chanutin*, 503

Ascorbic acid: Folic acid-, interrelationships, *Schwartz and Williams*, 481

l-, xanthine oxidase, effect, *in vitro*, *Feigelson*, 843

Nitrogen 15 incorporation into collagen *in vivo*, effect, *Robertson*, 495

Asparagine: Transamination and deamidation, *Meister, Sober, Tice, and Fraser*, 319

Aspartic acid: Acetate conversion to, yeast, *Wang, Thomas, Cheldelin, and Christensen*, 663

D-, lactic acid bacteria, D-amino acid utilization, effect, *Camien*, 687

Pyruvate conversion to, yeast, *Wang, Thomas, Cheldelin, and Christensen*, 663

Azaguanine: 8-, essential metabolites, effect, *Kidder, Dewey, and Parks*, 193

—, *Tetrahymena geleii* nucleic acid, incorporation, *Heinrich, Dewey, Parks, and Kidder*, 199

B

Bacillus: *See also Lactobacillus*

Bacteria: Enzymes, cytosine, thymine, uracil, and barbituric acid metabolism, *Hayaishi and Kornberg*, 717

Bacteria—*continued:*
Growth, peptides and, relation, *Kihara, McCullough, and Snell,* 783
Kihara and Snell, 791
Kihara, Klatt, and Snell, 801
Lactic acid, D-amino acid utilization, *Camien,* 687
— —, — — utilization, D-aspartic acid effect, *Camien,* 687
— —, *o*-phenanthroline effect, *MacLeod,* 751
See also Escherichia, Pseudomonas, Serratia, Streptococcus
Barbituric acid: Metabolism, bacterial enzymes, *Hayaishi and Kornberg,* 717
Bean: Soy, flour, toxic substance, purification, *Liener and Pallansch,* 29
Bile acid(s): Steroids, *Mattox, Woroch, Fleisher, and Kendall,* 261
Blood plasma: Anticoagulants, effect, *Hoch and Chanutin,* 503
Proteins, transport to lymph, *Forker, Chaikoff, and Reinhardt,* 625
Blood serum: Anticoagulants, effect, *Hoch and Chanutin,* 503
Calcium, determination, volumetric, *Elliott,* 641
Electrolytes, *Copeland and Sunderman,* 331
Willis and Sunderman, 343
Magnesium, nomograms, *Willis and Sunderman,* 343
Proteins, magnesium binding, *Copeland and Sunderman,* 331
Ultrafiltrates, magnesium, nomograms, *Willis and Sunderman,* 343
Butyric acid: β-Aminoiso-. *See* Aminoisobutyric acid

C

Calcification: *Sobel and Hanok,* 669
Calcium: Blood serum, determination, volumetric, *Elliott,* 641
Carbohydrate(s): Metabolism, kidney, radiophosphorus in study, *Dratz and Handler,* 419
Carbonate: Casein amino acids, precursor, *Black, Kleiber, and Smith,* 365
Carbon dioxide: Fixation, *Serratia marcescens,* amino acids, purines, and pyrimidines, effect, *McLean and Purdie,* 539
Casein: Amino acids, carbonate and fatty acids as precursors, *Black, Kleiber, and Smith,* 365
Cholesterol: Metabolism, pantothenic acid deficiency, effect, *Guehring, Hurley, and Morgan,* 485
Choline: Glycerylphosphoryl-. *See* Glycerylphosphorylcholine
Choline oxidase: Mitochondria, *Williams,* 709
Cholinesterase: Acetyl-. *See* Acetylcholinesterase
Coagulation: *See also* Anticoagulant
Collagen: Nitrogen 15 incorporation *in vivo,* ascorbic acid effect, *Robertson,* 495
Copper: Uric acid oxidation, effect, *Griffiths,* 399
Cortisone: 6-Dehydro-. *See* Dehydrocortisone
Glucose production and oxidation, effect, *Welt, Stetten, Ingle, and Morley,* 57
Liver, fatty acid oxidation, effect, *Lipsett and Moore,* 303
Tyrosine metabolism, scurvy, effect, *Basinski, Williams, and Freund,* 433
Cypridina: Luciferin, partition, chromatographic, *Mason and Davis,* 41
Cytochemistry: *Hogeboom and Schneider,* 611
Cytochrome: *c,* isolation and properties, *Neilands,* 701
— reductase, diphosphopyridine nucleotide, preparation and properties, *Edelhoch, Hayaishi, and Teply,* 97
-Cytochrome oxidase system, uric acid oxidation, effect, *Griffiths,* 399
Succinoxidase system, *Chance,* 557, 567
Cytochrome oxidase: Cytochrome-, system, uric acid oxidation, effect, *Griffiths,* 399

Cytosine: Metabolism, bacterial enzymes, *Hayaishi and Kornberg*, 717

D

Dehydrocortisone: 6-, preparation, *Mattox, Woroch, Fleisher, and Kendall*, 261
Dehydrogenase: L-Glutamic. *See* Glutamic dehydrogenase
Dehydroisoandrosterone: Determination, *Graff*, 741
Desoxypentose nucleic acid: Thymus, titration, *Shack and Thompsett*, 17
Desoxypentose nucleoprotein: Amino acid incorporation *in vitro*, *Brunish and Luck*, 869
Deuterio-C^{14}-formate: Methyl group synthesis *in vivo*, use, *Ressler, Rachele, and du Vigneaud*, 1
Diaphragm: Glucose uptake, growth hormone effect, *Park, Brown, Cornblath, Daughaday, and Krahl*, 151
—, utilization, soaking effect, *Brown, Park, Daughaday, and Cornblath*, 167
Peptidase, *Schwartz, Engel, and Towbin*, 381
Dihydroxymaleic acid: Oxidase and peroxidase reactions, effect, *Chance*, 577
Diphosphopyridine nucleotide: Cytochrome *c* reductase, preparation and properties, *Edelhoch, Hayaishi, and Teply*, 97
Synthesis, liver cell nuclei, *Hogeboom and Schneider*, 611
Diphosphopyridine nucleotide nucleosidase: Liver, intracellular, *Sung and Williams*, 175

E

Electrolyte(s): Blood serum, *Copeland and Sunderman*, 331
Willis and Sunderman, 343
Enzyme(s): Bacterial, cytosine, thymine, uracil, and barbituric acid metabolism, *Hayaishi and Kornberg*, 717
Enzyme(s)—*continued:*
Glutamic acid polypeptide hydrolysis, *Green and Stahmann*, 771
α-Keto acids, preparation, *Meister*, 309
See also Acetylcholinesterase, Cholinesterase, *etc.*
Escherichia coli: Purine metabolism, *Koch, Putnam, and Evans*, 105

F

Fatty acid(s): Casein amino acids, precursor, *Black, Kleiber, and Smith*, 365
Oxidation, liver, adrenalectomy and cortisone effect, *Lipsett and Moore*, 303
Synthesis, tissue slices, nutritional factors, *Medes, Thomas, and Weinhouse*, 181
Fluoroacetate: Tissue amino acids, free, effect, *Awapara*, 695
Folic acid: -Ascorbic acid interrelationships, *Schwartz and Williams*, 481
Formate: Deuterio-C^{14}-. *See* Deuterio-C^{14}-formate
Precursors *in vivo*, *Weinhouse and Friedmann*, 733
Formylpteridine: 6-, liver xanthine oxidase, effect, *Dietrich, Monson, Williams, and Elvehjem*, 37
Fructose-1,6-diphosphatase: Proteolysis, *Pogell and McGilvery*, 293

G

Glucose: Production and oxidation, cortisone effect, *Welt, Stetten, Ingle, and Morley*, 57
Uptake, diaphragm, growth hormone effect, *Park, Brown, Cornblath, Daughaday, and Krahl*, 151
Utilization, diaphragm, soaking effect, *Brown, Park, Daughaday, and Cornblath*, 167
Glucuronic acid-1-phosphate: β-D-, synthesis and properties, *Touster and Reynolds*, 863

Glutamic acid: D-, utilization, *Lactobacillus arabinosus*, glutamic racemase relation, *Ayengar and Roberts*, 453
Polypeptides, synthesis and enzymatic hydrolysis, *Green and Stahmann*, 771
Glutamic dehydrogenase: L-, crystallization and characterization, *Olson and Anfinsen*, 67
Glutamic racemase: Glutamic acid utilization, *Lactobacillus arabinosus*, relation, *Ayengar and Roberts*, 453
Glutamine: Transamination and deamidation, *Meister, Sober, Tice, and Fraser*, 319
Glycerylphosphorylcholine: Tissue, mammalian, *Schmidt, Hecht, Fallot, Greenbaum, and Thannhauser*, 601
Growth: Hormone, diaphragm glucose uptake, effect, *Park, Brown, Cornblath, Daughaday, and Krahl*, 151
Guanine: 8-Aza-. *See* Azaguanine

H

Hexokinase: Phospho-. *See* Phosphohexokinase
Histamine: Imidazoleacetic acid from, *in vivo, Mehler, Tabor, and Bauer*, 475
Histone: Amino acid incorporation *in vitro, Brunish and Luck*, 869
Nucleo-. *See* Nucleohistone
Hyaluronic acid: Methylated, methyl ester, *Jeanloz*, 141

I

Imidazoleacetic acid: Histamine oxidation to, *in vivo, Mehler, Tabor, and Bauer*, 475
Insulin: Liver acetate lipogenesis, action, *Masri, Lyon, and Chaikoff*, 621
Intestine: Phosphatase, transphosphorylation, *Green and Meyerhof*, 347

K

Keto acid(s): α-, enzyme preparation, *Meister*, 309
Ketoglutaric oxidase: α-, *Sanadi, Littlefield, and Bock*, 851
Ketosteroid(s): 17-, determination' *Graff*, 741
Kidney: Carbohydrate metabolism, radiophosphorus in study, *Dratz and Handler*, 419
Phosphate metabolism, radiophosphorus in study, *Dratz and Handler*, 419

L

Lactic acid: Bacteria, D-amino acid utilization, *Camien*, 687
—, — — —, D-aspartic acid effect, *Camien*, 687
—, *o*-phenanthroline effect, *MacLeod*, 751
Lactobacillus arabinosus: D-Glutamic acid utilization, glutamic racemase relation, *Ayengar and Roberts*, 453
Lactobacillus casei: Growth, L-alanine peptides, relation, *Kihara and Snell*, 791
— factor, peptide factor, purification, *Kihara, McCullough, and Snell*, 783
Leaf: Green, proteins, *Singer, Eggman, Campbell, and Wildman*, 233
—, —, cytoplasmic, *Singer, Eggman, Campbell, and Wildman*, 233
Lipogenesis: Liver acetate, insulin effect, *Masri, Lyon, and Chaikoff*, 621
Liver: Acetate lipogenesis, insulin effect, *Masri, Lyon, and Chaikoff*, 621
Cell nucleus, diphosphopyridine nucleotide synthesis by, *Hogeboom and Schneider*, 611
Diphosphopyridine nucleotide nucleosidase, intracellular, *Sung and Williams*, 175
Fatty acid oxidation, adrenalectomy and cortisone effect, *Lipsett and Moore*, 303
Pyrimidines, biogenesis, orotic acid effect, *Reichard*, 391
Xanthine oxidase, 6-formylpteridine effect, *Dietrich, Monson, Williams, and Elvehjem*, 37
— — synthesis *in vitro*, *Dhungat and Sreenivasan*, 831

Luciferin: *Cypridina*, partition, chromatographic, *Mason and Davis*, 41
Lymph: Blood plasma proteins, transport, *Forker, Chaikoff, and Reinhardt*, 625

M

Magnesium: Binding, blood serum proteins, *Copeland and Sunderman*, 331
Blood serum and ultrafiltrates, nomograms, *Willis and Sunderman*, 343
Malate: DL-, tobacco leaf culture, effect, *Vickery, Hargreaves, and Nolan*, 133
L-, tobacco leaf culture, effect, *Vickery and Hargreaves*, 121
Maleic acid: Dihydroxy-. *See* Dihydroxymaleic acid
Metabolism: Turnover, tritium as tracer, *Thompson*, 81
Methyl group: Labile, synthesis *in vivo*, deuterio-C^{14}-formate use, *Ressler, Rachele, and du Vigneaud*, 1
Milk: Constituents, acetate as precursor, *Kleiber, Smith, Black, Brown, and Tolbert*, 371
Mitochondrium: Choline oxidase, *Williams*, 709
Respiration, potassium effect, *Pressman and Lardy*, 547
Mold: *See also Neurospora*
Mosaic: Tobacco, virus, nucleic acids, *Knight*, 241
Muscle: *See also* Diaphragm

N

Neurospora: Tyrosinase, *Horowitz and Shen*, 513
Nitrogen: Mass 15, incorporation into collagen *in vivo*, ascorbic acid effect, *Robertson*, 495
Nucleic acid(s): Desoxypentose. *See* Desoxypentose nucleic acid
Ribo-. *See* Ribonucleic acid
Synthesis *in vivo*, purine nucleoside utilization, *Lowy, Davoll, and Brown*, 591
Nucleic acid(s)—*continued:*
Tetrahymena geleii, 8-azaguanine incorporation, *Heinrich, Dewey, Parks, and Kidder*, 199
Tobacco mosaic virus, *Knight*, 241
Nucleohistone: Thymus, titration, *Shack and Thompsett*, 17
Nucleoprotein: Desoxypentose. *See* Desoxypentose nucleoprotein
Nucleosidase: Diphosphopyridine nucleotide. *See* Diphosphopyridine nucleotide nucleosidase
Nucleotide: Diphosphopyridine. *See* Diphosphopyridine nucleotide
Nutrition: Factors, tissue fatty acid synthesis, *Medes, Thomas, and Weinhouse*, 181

O

Organic acid(s): Tobacco leaves, metabolism, *Vickery and Hargreaves*, 121
Vickery, Hargreaves, and Nolan, 133
Orotic acid: Liver pyrimidine, biogenesis, effect, *Reichard*, 391
Oxidase: Choline. *See* Choline oxidase
α-Ketoglutaric. *See* Ketoglutaric oxidase
Reactions, dihydroxymaleic acid effect, *Chance*, 577
Succinic. *See* Succinic oxidase
Xanthine. *See* Xanthine oxidase

P

Pantothenic acid: Cholesterol metabolism, effect, *Guehring, Hurley, and Morgan*, 485
Paramecium aurelia: Killer action, *Williamson, Jacobson, and Stock*, 763
Pepsin: Adrenocorticotropic hormone, effect, *Carpenter, Hess, and Li*, 7
Peptidase: Diaphragm, *Schwartz, Engel, and Towbin*, 381
Peptide(s): L-Alanine, *Lactobacillus casei* growth, relation, *Kihara and Snell*, 791
Bacterial growth, relation, *Kihara, McCullough, and Snell*, 783
Kihara and Snell, 791
Kihara, Klatt, and Snell, 801

Peptide(s)—*continued:*
Chromatography, transamidation reactions, *Dowmont and Fruton*, 271
Factor, *Lactobacillus casei* growth, purification, *Kihara, McCullough, and Snell*, 783
Peroxidase: Reactions, dihydroxymaleic acid effect, *Chance*, 577
Phenanthroline: *o*-, lactic acid bacteria, effect, *MacLeod*, 751
Phosphatase: Fructose-1,6-di-. *See* Fructose-1,6-diphosphatase
Intestine, transphosphorylation, *Green and Meyerhof*, 347
Semen, transphosphorylation, *Green and Meyerhof*, 347
Synthesis, *Green and Meyerhof*, 347
Phosphate: Metabolism, kidney, radiophosphorus in study, *Dratz and Handler*, 419
Phosphohexokinase: Plants, *Axelrod, Saltman, Bandurski, and Baker*, 89
Phosphorus: Radio-, phosphate and carbohydrate metabolism, kidney, use in study, *Dratz and Handler*, 419
Plant(s): Phosphohexokinase, *Axelrod, Saltman, Bandurski, and Baker*, 89
Polypeptide(s): Glutamic acid, synthesis and enzymatic hydrolysis, *Green and Stahmann*, 771
Potassium: Mitochondrium respiration, effect, *Pressman and Lardy*, 547
Proteinase: *Streptococcus*, crystalline, *Mycek, Elliott, and Fruton*, 637
Protein(s): Blood plasma, transport to lymph, *Forker, Chaikoff, and Reinhardt*, 625
— serum, magnesium binding, *Copeland and Sunderman*, 331
Cytoplasm, leaf, green, *Singer, Eggman, Campbell, and Wildman*, 233
Leaf, green, *Singer, Eggman, Campbell, and Wildman*, 233
Nucleo-. *See* Nucleoprotein
Protozoa: *See also Tetrahymena*
Pseudomonas tabaci: Toxin, phytopathogenic, isolation, *Woolley, Pringle, and Braun*, 409
Pteridine: 6-Formyl-. *See* Formylpteridine
Purine(s): Carbon dioxide fixation by *Serratia marcescens*, effect, *McLean and Purdie*, 539
Metabolism, *Escherichia coli*, *Koch, Putnam, and Evans*, 105
—, virus reproduction, *Koch, Putnam, and Evans*, 113
—, yeast, *Edmonds, Delluva, and Wilson*, 251
Ribonucleic acid, determination, spectrophotometric, *Loring, Fairley, Bortner, and Seagran*, 809
Yeast ribonucleic acid, *Loring, Fairley, and Seagran*, 823
Purine nucleoside(s): Nucleic acid synthesis *in vivo*, utilization, *Lowy, Davoll, and Brown*, 591
Pyrimidine(s): Carbon dioxide fixation by *Serratia marcescens*, effect, *McLean and Purdie*, 539
Liver, biogenesis, orotic acid effect, *Reichard*, 391
Metabolism, yeast, *Edmonds, Delluva, and Wilson*, 251
Ribonucleic acid, determination, spectrophotometric, *Loring, Fairley, Bortner, and Seagran*, 809
Urine β-aminoisobutyric acid, administration effect, *Fink, Henderson, and Fink*, 441
Yeast ribonucleic acid, *Loring, Fairley, and Seagran*, 823
Pyruvate: Carbon 14-labeled, radioactive yeast fractions, relation, *Labbe, Thomas, Cheldelin, Christensen, and Wang*, 655
— —, utilization, yeast, *Wang, Labbe, Christensen, and Cheldelin*, 645
Yeast, aspartic acid conversion from, *Wang, Thomas, Cheldelin, and Christensen*, 663

R

Reductase: Diphosphopyridine nucleotide cytochrome *c*, preparation and properties, *Edelhoch, Hayaishi, and Teply*, 97
Ribonucleic acid: Purine and pyrimidine components, determination, spec-

Ribonucleic acid—*continued:*
trophotometric, *Loring, Fairley, Bortner, and Seagran,* 809
Yeast, dinucleotides, chemical constitution and microbiological activity, *Merrifield and Woolley,* 521
—, purines and pyrimidines, *Loring, Fairley, and Seagran,* 823

S

Sapogenin(s): Steroid, acetates, chromatography, *Heftmann and Hayden,* 47
—, chromatography, *Heftmann and Hayden,* 47
Scurvy: Tyrosine metabolism, cortisone and adrenocorticotropic hormone effect, *Basinski, Williams, and Freund,* 433
Semen: Phosphatase, transphosphorylation, *Green and Meyerhof,* 347
Serratia marcescens: Carbon dioxide fixation, amino acids, purines, and pyrimidines, effect, *McLean and Purdie,* 539
Soy bean: *See* Bean, soy
Steroid(s): Bile acids, *Mattox, Woroch, Fleisher, and Kendall,* 261
17-Keto-. *See* Ketosteroid
Sapogenins and acetates, chromatography, *Heftmann and Hayden,* 47
Streptococcus: Proteinase, crystalline, *Mycek, Elliott, and Fruton,* 637
Streptococcus faecalis: Tyrosine and tyrosine peptides, utilization, *Kihara, Klatt, and Snell,* 801
Succinate: Tobacco leaf culture, effect, *Vickery and Hargreaves,* 121
Succinic oxidase: System, cytochrome, *Chance,* 557, 567

T

Tetrahymena geleii: Nucleic acid, 8-azaguanine incorporation, *Heinrich, Dewey, Parks, and Kidder,* 199
Threonine: 4-C^{14},N^{15}-L-, synthesis and metabolism, *Meltzer and Sprinson,* 461
Thymine: Determination, colorimetric, *Day and Mosher,* 227
Thymine—*continued:*
Metabolism, bacterial enzymes, *Hayaishi and Kornberg,* 717
Thymus: Desoxypentose nucleic acid, titration, *Shack and Thompsett,* 17
Nucleohistone, titration, *Shack and Thompsett,* 17
Tobacco: Leaf culture, DL-malate solutions, culture effect, *Vickery, Hargreaves, and Nolan,* 133
Leaves, organic acids, metabolism, *Vickery and Hargreaves,* 121
Vickery, Hargreaves, and Nolan, 133
—, succinate and L-malate solutions, culture effect, *Vickery and Hargreaves,* 121
Mosaic virus, nucleic acids, *Knight,* 241
Toxin: Phytopathogenic, *Pseudomonas tabaci,* isolation, *Woolley, Pringle, and Braun,* 409
Transamidation: Reactions, peptide chromatography, *Dowmont and Fruton,* 271
Transphosphorylation: Phosphatase, intestine and semen, *Green and Meyerhof,* 347
Tritium: Metabolic turnover, use as tracer, *Thompson,* 81
Tyrosinase: *Neurospora, Horowitz and Shen,* 513
Tyrosine: Metabolism, scurvy, cortisone and adrenocorticotropic hormone effect, *Basinski, Williams, and Freund,* 433
Peptides, *Streptococcus faecalis* utilization, *Kihara, Klatt, and Snell,* 801
Streptococcus faecalis utilization, *Kihara, Klatt, and Snell,* 801

U

Uracil: Metabolism, bacterial enzymes, *Hayaishi and Kornberg,* 717
Uric acid: Oxidation, copper effect, *Griffiths,* 399
—, cytochrome-cytochrome oxidase system, effect, *Griffiths,* 399

Urine: β-Aminoisobutyric acid, pyrimidine, administration effect, *Fink, Henderson, and Fink,* 441

V

Virus: Reproduction, biochemistry, *Koch, Putnam, and Evans,* 113
—, purine metabolism, *Koch, Putnam, and Evans,* 113
Tobacco mosaic, nucleic acids, *Knight,* 241
Vitamin(s): C. *See also* Ascorbic acid

X

Xanthine oxidase: *l*-Ascorbic acid effect *in vitro, Feigelson,* 843
Liver, 6-formylpteridine effect, *Dietrich, Monson, Williams, and Elvehjem,* 37
Synthesis, liver, *in vitro, Dhungat and Sreenivasan,* 831

Y

Yeast: Acetate, carbon 14-labeled, utilization, *Wang, Labbe, Christensen, and Cheldelin,* 645
Acetate conversion to aspartic acid, *Wang, Thomas, Cheldelin, and Christensen,* 663
Purine metabolism, *Edmonds, Delluva, and Wilson,* 251
Pyrimidine metabolism, *Edmonds, Delluva, and Wilson,* 251
Pyruvate, carbon 14-labeled, utilization, *Wang, Labbe, Christensen, and Cheldelin,* 645
— conversion to aspartic acid, *Wang, Thomas, Cheldelin, and Christensen,* 663
Radioactive fractions, carbon 14-labeled pyruvate and acetate, relation, *Labbe, Thomas, Cheldelin, Christensen, and Wang,* 655
Ribonucleic acid dinucleotides, chemical constitution and microbiological activity, *Merrifield and Woolley,* 521
— —, purines and pyrimidines, *Loring, Fairley, and Seagran,* 823
